PROFILE AT A GLANCE

Senior Full Stack Engineer with **5+ years of experience building scalable SaaS, HRMS, analytics, and AI-enabled business platforms using Node.js, TypeScript, React.js, Next.js, PostgreSQL, MongoDB, Supabase, and modern full-stack technologies**. Strong expertise in backend architecture, **REST API design, database design, workflow automation, authentication, RBAC, CI/CD**, production support, and enterprise application delivery. Currently leading technical execution for a configurable **HRMS platform supporting 200+ employees**, covering payroll automation, attendance, leave management, onboarding, document workflows, manager transfers, and secure role-based access.

Experienced in delivering production-ready business platforms with measurable performance improvements, including optimized APIs, automated payroll and HR workflows, analytics pipelines, and subscription billing systems. Also contributing as a **Full Stack Developer** on an AI agents B2B SaaS automation and voice-calling platform involving **OpenAI APIs, real-time communication, Twilio Voice, Supabase, Zendesk, SendGrid**, and multi-channel deployments across Web, WhatsApp, Telegram, Instagram, Facebook, and Voice. Independently architected and shipped **Operentiq**, a full-stack AI-powered SaaS product built end-to-end with Next.js, React, TypeScript, and Supabase/PostgreSQL. Hands-on experience with Docker-based containerization, Redis caching, and Jest-driven automated testing across platforms. Well-suited for **Full Stack Engineer, Senior Backend Engineer, Product Engineer, and SaaS platform** roles requiring strong ownership, product thinking, cross-functional collaboration, and hands-on technical leadership.

AREAS OF EXPERTISE

Core Skills:

- Full-stack development (React, Next.js, Node.js, TypeScript)
- Backend architecture & API design (REST, microservices patterns)
- System design (scalable SaaS, workflow-heavy enterprise systems)
- Database engineering (PostgreSQL, MongoDB, Supabase, query optimization)
- Authentication & security (JWT, OAuth 2.0, RBAC, SSO concepts)
- Real-time systems (WebSockets, event-driven workflows)
- Performance tuning (API latency reduction, DB optimization)
- CI/CD & release engineering (Jenkins, deployment pipelines)
- Containerization & caching (Docker module-wise service containers, Redis)
- Automated testing (Jest unit & cron job test coverage)
- AI application integration (OpenAI APIs, LLM integrations, conversational workflows)
- Production debugging & support (incident resolution, log analysis)

Functional Skills

- End-to-end ownership of enterprise SaaS modules (HRMS, analytics, AI platform)
- Payroll, attendance, onboarding, and HR workflow system design
- Workflow automation using cron-based and scheduled processing systems

- Designing multi-role enterprise systems (RBAC, approvals, manager hierarchies)
- Production release coordination and deployment troubleshooting
- Cross-team collaboration (QA, product, frontend, backend alignment)
- Technical leadership under constrained or transitioning team structures
- Mentoring junior engineers and enforcing engineering standards
- API performance optimization and system reliability improvements
- SaaS monetization flows (subscriptions, billing integrations like Stripe)

PROFESSIONAL EXPERIENCE

Mayavi – AI Agent Platform| Incredible Visibility
AI Automation & Voice Calling Platform — Full Stack Developer
 May 2026 – Present

- Contributed as a **Full Stack Developer** on Mayavi's **AI Automation & Voice Calling platform**, developing and enhancing functionality across **Agents, Assistants, Teams, Automation Builder, Tool Creation, Credentials**, and publishing workflows.
- Built reusable **React/TypeScript UI components**, configuration panels, validation flows, schema-driven interfaces, and responsive builder experiences, integrating them with **backend APIs**.
- Implemented and integrated **agent, tool, and assistant configuration**, automation workflows, credential management, and output-schema validation, defining **API contracts** and leading **migrations and architectural refactoring** for long-term maintainability.
- Collaborated through **Git/Bitbucket PR-based development** and code reviews, resolving reviewer feedback and hardening functionality across UI, backend integration, validation, and runtime configuration.
- Worked across the **React, TypeScript, JavaScript, REST APIs, JSON/JSON Schema, Node.js, Git, Bitbucket, Docker, and AI/LLM integration** stack to deliver production-ready automation and voice-calling features.

HRMS Platform| Incredible Visibility
 Jun 2023 – Jun 2026

- Led the technical execution and delivery of a configurable **HRMS platform covering Employee Management, Payroll, Attendance, Leave, and Document Management**, built using **Node.js, Express.js, TypeScript, React.js, and PostgreSQL**
- Defined and enforced **backend architecture standards, API design principles, release planning processes, production readiness checks, and engineering quality practices**
- Delivered and enhanced **7+ core HRMS modules**, including **employee lifecycle management, payroll processing, attendance tracking, leave management, onboarding workflows, authentication systems, and document management flows**
- Architected and implemented a **configurable payroll engine** supporting **salary structures, statutory deductions (PF, ESI, TDS), reimbursements, and custom payroll rules**
- Designed end-to-end system architecture for **payroll processing, employee onboarding, leave policy renewals, and manager transfer workflows**, including **database schema design, API contracts, cron-based automation, and UI flow design**
- Implemented **automation-driven HR workflows** such as **leave accruals, policy renewals, payroll calculations, and attendance processing** using **scheduled cron jobs and configurable business rules**
- Modularized the platform using **Docker**, running **Employee, Onboarding, Leave, Attendance, and Payroll modules as separate containerized services** for independent deployment and scaling
- Implemented **Jest-based automated test coverage** for the **Leave, Payroll, and Attendance modules**, including dedicated test suites for **scheduled cron job workflows** to catch regressions before release

- Built **secure and scalable HRMS capabilities**, including **React.js dashboards with TanStack Query, OAuth 2.0, JWT-based authentication, RBAC, API monitoring, Jenkins CI/CD pipeline builds, production debugging and error resolution, performance optimization (25% API improvement), and mentoring junior engineers while ensuring stable releases for 200+ employee workforce systems**

HelloLeads| Incredible Visibility
 Mar 2021 – Jun 2023

- Designed and implemented **scalable REST APIs** for a **visitor analytics and lead tracking platform** using **Node.js, Express.js, and MongoDB**
- Developed and maintained **analytics pipelines** to collect and process daily visitor engagement events for **customer reporting dashboards**
- Built **cron-driven data workflows** for analytics generation, visitor scoring, reporting aggregation, and scheduled data processing
- Managed **end-to-end Stripe subscription billing**, including webhook handling, plan management, and full **payment lifecycle automation**
- Created **internal admin dashboards** using **Vue.js and Tailwind CSS** to support platform monitoring, lead funnel analysis, and billing operations
- Optimized **MongoDB queries and aggregation pipelines**, achieving approximately **30% reduction in high-traffic query latency**
- Collaborated with **frontend, QA, and product teams** to ensure **stable production releases**, including API validation, logging enhancements, and backend performance tuning

Programmer Analyst| Walmart
 Jun 2018 – Dec 2018

- Developed **Node.js APIs** to integrate **internal enterprise systems** with the **OneOps cloud platform**, enabling seamless system connectivity
- Implemented **OAuth 2.0 authentication** and enhanced **API security measures** to ensure secure data access
- Built **operational tools** and supported **enterprise migration workflows** along with **production support tasks**
- Partnered with **cross-functional teams** to drive **enterprise integration initiatives** and ensure smooth system interoperability

Career Break & Skill Development
 Jan 2019 – Feb 2021

- Took a planned career break for family responsibilities while **continuing to upskill in modern JavaScript and full-stack development**
- Strengthened expertise in **Node.js, React.js, REST APIs, authentication systems, databases, and scalable backend architecture**
- Developed **personal projects** to enhance practical experience with **modern web application workflows**

PROJECTS HANDLED

Operentiq | Personal Project — AI-Powered Operational Intelligence Platform

- Independently designed and developed **Operentiq**, an AI-powered SaaS platform for customer support and service delivery teams to centralize operational knowledge, incidents, workflows, and customer context.
- Architected the application using **Next.js, React, TypeScript, Tailwind CSS, Supabase/PostgreSQL, and REST APIs**, with a focus on scalable SaaS architecture and production-ready application design.
- Built a secure **authentication and onboarding flow** with **Supabase Auth**, organization and user profile management, session handling, and role-aware application access.

- Designed a **Knowledge Base system** allowing users to upload and manage organizational data, enabling **AI-assisted retrieval** and contextual question answering.
- Developed an **AI Assistant experience** that answers questions using the organization's available knowledge and clearly handles out-of-scope queries rather than fabricating answers.
- Designed the platform around **operational context and incident intelligence**, including customer history, incident information, similar-incident patterns, and SOP-based guidance.
- Built reusable **dashboards and application modules** for managing customers, incidents, integrations, and operational data with responsive React interfaces.
- Implemented **production deployment**, environment configuration, authentication redirects, SEO metadata, sitemap/robots configuration, and deployment troubleshooting for the live SaaS application.
- Integrated **email workflows** and supporting infrastructure using **Supabase, Nodemailer/Mailtrap**, and server-side API routes, with error handling and production debugging across the authentication and application stack.
- Independently handled **product architecture, UI/UX implementation, backend development, database design, authentication, deployment, debugging, and iterative product development** from concept to working SaaS application.

Internal Task Tracking Tool | AI-assisted Full Stack Project

- Designed and developed an internal task management platform that streamlined task allocation, progress tracking, time management, reporting, and team-wide workflow visibility.
- Implemented robust **role-based access control (RBAC)** for Developers, QA Engineers, Managers, HR personnel, and Administrators, ensuring secure and efficient user management.
- Built an automated attendance and time-tracking system featuring clock-in/clock-out functionality, billable hour calculations, and performance reporting.
- Developed interactive reporting dashboards and CSV/Excel export capabilities to support data-driven decision-making and operational transparency.
- Engineered the application using **Node.js, Express.js, MongoDB Atlas, React.js, Tailwind CSS, and JWT-based authentication** for a scalable and secure architecture.
- Utilized AI-assisted development tools to accelerate prototyping, optimize debugging processes, enhance feature delivery, and improve overall development efficiency.

CERTIFICATIONS & COURSES

- McKinsey Forward Program from McKinsey & Company
- Claude AI in Action from Anthropic
- Claude 101 from Anthropic

EDUCATION

- M.S. Computer & Information Sciences from Kent State University, Ohio, USA| 2016
- B.Tech in Computer Science & Engineering from Guru Nanak Institute of Technology, Hyderabad| 2014
